

MACBATEC Service for improved performance at lower cost and cleaner environment.

MACBATEC Service of your deep cycle lead-acid batteries is performed by your local MACBATEC Service provider, who improves the performance and extends the life-span of your batteries.

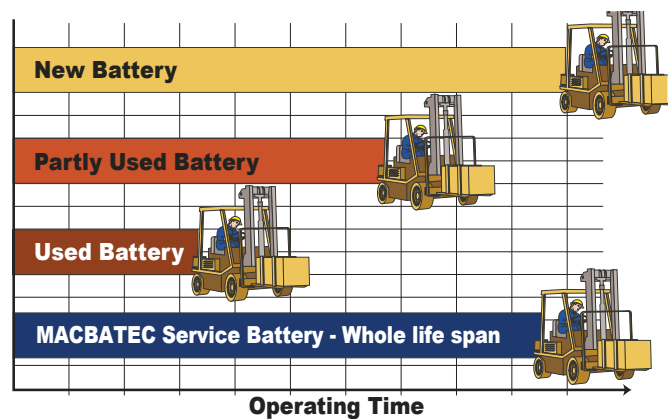

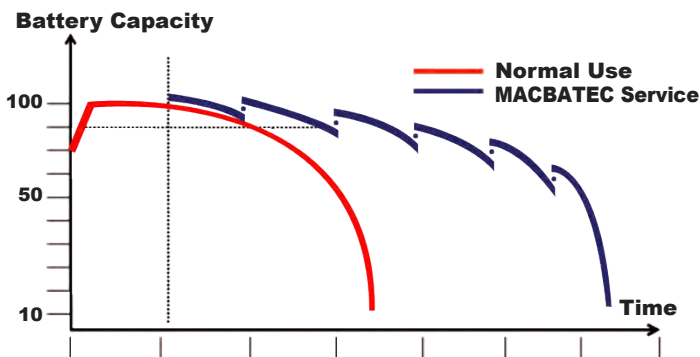

Compared to normal use and maintenance; regular MACBATEC Service doubles the life span for motive and traction power batteries and triples the life span of stationary stand-by power batteries.

Regular MACBATEC Service keeps your battery capacity above 80% and reduces your total battery life cycle cost. MACBATEC Service minimises the consumption and transportation of lead resulting in a smaller carbon footprint and cleaner environment.

MACBATEC Service is typically made during one day every second year. The actual duration and interval depends upon the working conditions for

your batteries. Your local MACBATEC Service provider evaluates your batteries and makes a proposal for satisfying your specific needs.

In case of already used batteries; a full MACBATEC Service can recover at least half of the lost capacity, provided that the battery has been reasonably maintained and is mechanically and electrically intact before the full MACBATEC Service is made.

MACBATEC Service

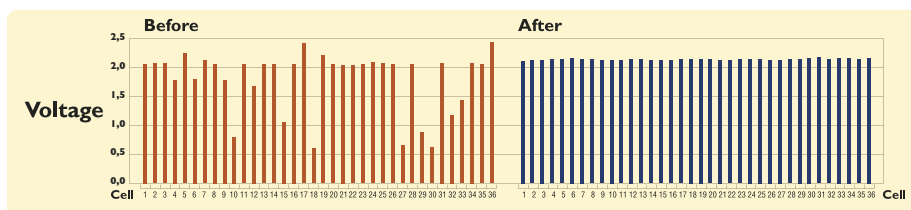

MACBATEC Service converts inert crystals into active material bringing new life into your battery:

- Improving your battery performance
- Reducing your battery life cycle cost
- Contributing to a cleaner environment

MACBATEC Service adheres to global directives and legislation by effectively reducing and reusing lead-acid batteries before recycling for a better and more sustainable world.

Unique Technology by MACBATEC

MACBATEC SL is a Spanish-Swedish company, which since 1998 develops unique technology and methods for regeneration and reuse of deep cycle lead-acid batteries. Those batteries are used for material handling (forklifts), in electrical vehicles, trains and ships and as backup power for tele and data communications (GSM/3G/4G), process industries, air ports and hospitals as well as in the production and distribution of renewable energy (hydro, solar and wind power).

Wanted!

MACBATEC SL is seeking more MACBATEC Service providers!

- MACBATEC Service providers operate local businesses in defined territories for supply and service of batteries.
- MACBATEC SL supplies the devices, methods and knowhow for battery regeneration and provides first hand introductions to selected environmentally friendly battery suppliers.
- The battery owners enjoy lower costs at improved efficiency and a smaller carbon foot print for a better environment.
